

# Midstream specimen of urine

Here's how to do it!

**1** Wash your hands with soap and water, then dry them well.

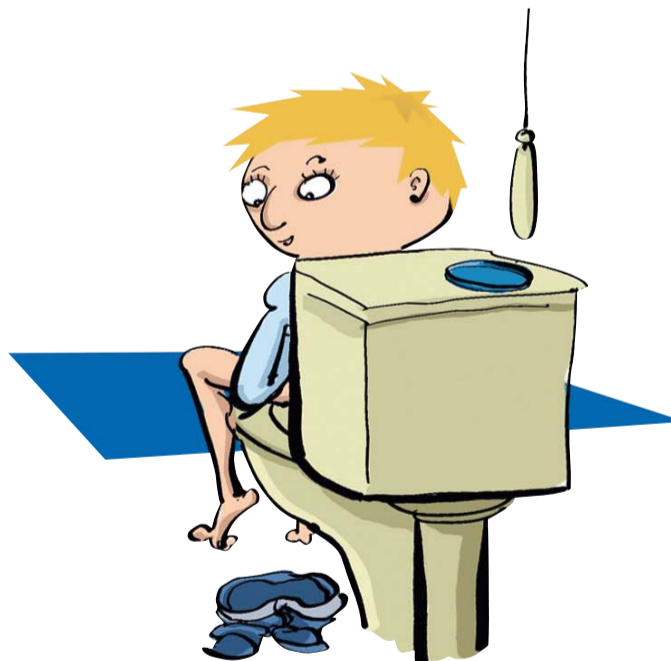

**2** Cleanse the genital area – especially around the urethral opening – with soap and rinse thoroughly with water. **Please do not dry!**

**3** Open the specimen cup. Please do not touch the inside of the cup or the lid, and put the lid down with the inside facing upwards.

**4** Pass a little urine into the toilet.

**5** Then catch the next part of the urine stream in the specimen cup. **Take care that the cup does not touch your body.**

**6** Now put the lid on the cup, and hand it over to be examined.
